File Type Handlers. 05/31/2018; 2 minutes to read; In this article.  
Registering a file type is the first step in creating a file  
association, which makes that file type "known" to the Shell. However,  
without file type handlers, the Shell is unable to expose information  
to the user from and about the file.

While these file types are associated with individual applications, other file types, such as rich text RTF files and MP3 audio files are standard file types that can be opened by multiple programs. The terms "file type" and "file format" are often used interchangeably. However, a file format technically describes the structure and content of a file. For example, the file type of an image file ...
