This issue of Surgical Clinics of North America, guest edited by Dr. Adrian Dan, is devoted to Metabolic and Bariatric Surgery. He has assembled expert authors to review the following topics: A Historical Perspective of Metabolic and Bariatric Surgery; The Socio-economic Impact of Morbid Obesity and Factors Affecting Access to Obesity Surgery; Laparoscopic Roux-en-Y Gastric Bypass-Surgical Technique and Peri-operative Care; Revisional Metabolic and Bariatric Surgery; Novel Endoscopic and Surgical Techniques for treatment of Morbid Obesity -A Glimpse into the Future; Management and Prevention of Surgical and Nutritional Complications After Bariatric Surgery; Resolution of Comorbidities and Impact on Longevity Following Bariatric and Metabolic Surgery; The Effects of Metabolic Surgery upon Fatty Liver Disease and Non-Alcoholic Steatohepatitis; Patient Selection and Surgical Management of High Risk Patients with Morbid Obesity; Laparoscopic Sleeve Gastrectomy-Surgical Technique and Peri-operative Care; Rise and Fall of the LAGB as a Bariatric Procedure; Plastic Surgery and Body Contouring Following Weight Loss Surgery; Biliopancreatic Diversion with Duodenal Switch-Surgical Technique and Perioperative Care; Morbid Obesity, Type 2 Diabetes and the Metabolic Syndrome-Pathophysiologic Relationships and Guidelines for Surgical Intervention; Patient Safety and Quality Improvement Initiatives in Contemporary Metabolic and Bariatric Surgical Practice; Type II Diabetes Mellitus - A Surgical Disease, and more!

This easy reference, easel style recipe book is a kitchen countertop companion. It is full of over 80 delicious, whole food, gluten-free recipes using healthy seasonal ingredients. The recipes can easily be adapted for vegan, paleo, and variety of diets. The fresh, fun, colorful recipes are useful for inexperienced as well as experienced cooks, and are referenced by season. They have a proven track record of changing lives for the better by helping people lose weight and gain and maintain a vibrant healthy lifestyle. With this recipe book you will learn new recipes and learn how to tweak your current family favorites with healthier options. Enjoy!

This issue will address health care issues and clinical implications of rural and other medically underserved priority populations. The Agency for Health Care Research and Quality identified priority populations to include rural residents, racial and ethnic minorities, low income groups, women, children, older adults, and other individuals who may require chronic care. The editors identified a need for articles focusing on priority populations to help further understand health implications of health disparities among specific populations. A main focus is on identifying useful clinically focused strategies to address racial, ethnic, and socioeconomic differences that are relevant and influence overall healthcare, access, and quality of life. The articles will provide clinicians and other consumers of Nursing Clinics of North America with a diverse and unique perspective on an array of clinically relevant and population focused topics. Some example topics included are: Tailoring interactive multimedia to improve diabetes self- management; Addressing mental and physical health among older adults; Using mobile devices to access evidence- based information in a rural setting; Identifying family history and development of risk factors for diabetes among underserved preschool children; Addressing smoking cessation, Cancer screening issues, Cardiovascular health, and Obesity.

Our market-based, profit-driven health care system in the United States has put necessary care increasingly beyond the reach of ordinary Americans. Primary health care, the fundamental foundation of all high-performing health care systems in the world, is a critical but ignored casualty of the current system. Unfortunately, primary care is often poorly understood, even within the health professions. This book describes what has become a crisis in primary care, defines its central role, analyzes the reasons for its decline, and assesses its impacts on patients and families. A constructive approach is presented to rebuild and transform U.S. primary care with the urgent goal to address the nation's problems of access, cost, quality and equity of health care for all Americans.

First Published in 1986. Routledge is an imprint of Taylor & Francis, an informa company. Humans have long been acute observers of their biological surroundings and have been involved in dynamic relationships with ambient flora and fauna since the development of the earliest medical systems and food-getting technologies. Human-plant interactions can, then, be viewed as one expression of a population's encounter with their environment and have been the subject of considerable interest in various disciplines which seek to understand how the use of plants affects patterns of health and disease. The aim of this volume is to promote a bio-behavioral focus for indigenous plant research.
